SUMMARY

Site Reliability Engineer with 7 years in software engineering, 5 of them operating production cloud infrastructure to a **99.95% availability target**. Built **Cloud.mn** — Mongolia's first public cloud platform — from the ground up to **300+ enterprise tenants**, and led its expansion into Kazakhstan. Writes production **Go**, codifies infrastructure in **Terraform**, runs workloads on **Kubernetes**, and owns on-call, runbooks, and the metrics and alerting that surface symptoms before they become outages. AWS Certified Solutions Architect – Professional. Uses automation — and increasingly LLM agents — to delete toil rather than absorb it.

CAREER NOTE: Completed on-campus studies and currently taking distance education courses to complete a Master's Degree in Computer Science (Available for full-time, W-2 employment).

TECHNICAL SKILLS

Reliability & Observability: SLIs/SLOs, error budgets, MTTR, on-call rotations, incident response, post-incident review, runbook authoring, Prometheus, Grafana, Node Exporter, Blackbox Exporter (black-box probing), CloudWatch, SNS alerting

Kubernetes & Containers: Kubernetes, Docker, Helm, ECS/ECR, rolling and zero-downtime deploys, container build & scan pipelines

IaC & CI/CD: Terraform (reusable modules), Ansible, GitLab CI, GitHub Actions, pipeline-driven deployment, self-service provisioning automation

Cloud (AWS): EC2, Auto Scaling, Launch Templates, VPC, ALB/ELB, Route 53, CloudFront, ACM, RDS (Multi-AZ), S3, IAM, Secrets Manager, SSM, CloudWatch — plus cost optimization / FinOps

Private Cloud & Virtualization: OpenStack (Compute, Networking, Identity, Storage APIs), KVM, multi-tenant control planes, hybrid on-prem-to-cloud migration

Languages & Data: Go, Python, Bash, TypeScript, PostgreSQL, MySQL/MariaDB, Redis, RabbitMQ

Systems & Security: Linux, Nginx, HAProxy, TLS, DNS, distributed systems, microservices, OWASP, SonarQube, Snyk, IAM least-privilege

EXPERIENCE

SENIOR DEVOPS / CLOUD ENGINEER

Mar 2024 – Jan 2026

Tech Partners

Ulaanbaatar, Mongolia

- Architected and codified a **multi-AZ AWS platform in reusable Terraform** (VPC, ALB, Auto Scaling, EC2 Launch Templates, RDS Multi-AZ, Route 53, ACM, ECR, Secrets Manager, SSM), replacing a fragile single-instance production setup with a highly available environment supporting zero-downtime releases.
- Built the production **observability stack** from scratch (Prometheus, Grafana, Node Exporter, Blackbox Exporter, CloudWatch, SNS) with **black-box endpoint probes and symptom-based alerting** on ASG lifecycle events, RDS saturation and endpoint health — degradation surfaced before customers reported it.
- Standardized CI/CD across **5+ products on GitLab CI and GitHub Actions** — build, test, OWASP-aligned scanning (SonarQube, Snyk), push to ECR, rolling deploy — reducing **change failure rate by 30%**.
- Authored the **runbooks** that let the operations team own deploys and first-line incident response independently, removing a single-owner bottleneck and shortening time-to-mitigate.
- Cut monthly AWS spend by **40%** through instance right-sizing, Auto Scaling target tracking, caching to reduce RDS load, and elimination of idle capacity.
- Delivered **MedOrder**, a healthcare SaaS platform written in **Go** (PostgreSQL, Redis, Kubernetes) processing **40,000+ pharmaceutical orders** under full regulatory compliance — owning both the service code and the production infrastructure it runs on.

PLATFORM ENGINEER

Mar 2025 – Jan 2026

EasySim.mn

Remote · Ulaanbaatar, Mongolia

Independent venture, built and operated solo alongside full-time engineering work — international eSIM service delivering mobile data in 100+ countries through a Mongolian super app.

- Ran the entire production platform single-handed as a **manager-of-one** — containerized **Go** services behind Nginx with TLS termination, centralized logging, health checks and uptime monitoring. No ops team, no downtime budget.

- Integrated multiple international eSIM supplier APIs for catalog sync, ordering, QR-code delivery and activation tracking, enabling **fully automated 24/7 fulfillment** with zero manual steps in the purchase path.
- Replaced first-line customer support with an **LLM agent** — RAG over the product knowledge base plus custom tools that act on live orders — resolving social-channel enquiries with no human in the loop.
- Built on Go, TypeScript, Node.js, PostgreSQL, Redis and Docker, automating product, pricing and data-plan management.

SYSTEM ARCHITECT

Apr 2022 – Mar 2024
Ulaanbaatar, Mongolia

- Cloud provider behind Cloud.mn — Mongolia’s first public cloud platform.
- Owned reliability for a **multi-tenant public cloud** serving 300+ enterprise tenants — ran the **production on-call rotation** to a **99.95% availability target**, and drove post-incident findings back into automation and runbooks rather than one-off fixes.
 - Directed platform engineering for Cloud.mn and TTC Cloud (**OpenStack, KVM, Kubernetes, Docker, MariaDB, Redis, RabbitMQ**), leading 20+ engineers, architects and PMs across a distributed team.
 - Took the company’s own cloud platform international, launching TTC Cloud on **Transtelecom — Kazakhstan’s largest datacenter** — coordinating datacenter operations, local payment providers and regional compliance.
 - Automated infrastructure provisioning and deployment workflows (Ansible, CI/CD), accelerating time-to-market for new cloud services by **35%**.

SENIOR SOFTWARE ENGINEER / TEAM LEAD

Oct 2021 – Apr 2022
Ulaanbaatar, Mongolia

- Fibo Cloud
- Led the infrastructure build-out of Cloud.mn with 10+ engineers (OpenStack, KVM, Ansible), building **net-new provisioning automation** that made customer onboarding self-service and cut manual provisioning time by **90%**.
 - Wrote **control-plane backend services from scratch against the OpenStack APIs** (Compute, Networking, Identity, Storage) with Kubernetes orchestration, enabling self-service multi-tenant resource management at scale.

FRONTEND ENGINEER

Mar 2019 – Oct 2021
Ulaanbaatar, Mongolia

- Fibo Cloud
- Built the Cloud.mn control panel (React, TypeScript) from the platform’s earliest stage — the user-facing layer of Mongolia’s first public cloud.
 - Moved into infrastructure through self-directed work on Ansible and the OpenStack APIs, taking on cloud delivery alongside frontend work and transitioning into platform engineering within two years.
 - Led UFE’s **migration to AWS** (CloudFront, EC2, EBS, RDS for MySQL, Auto Scaling) during Mongolia’s COVID-19 lockdown — delivered in **10 days** for 6,000+ students, since sustaining **99.99% availability**. Published as an official AWS case study.

CERTIFICATIONS

AWS Certified Solutions Architect – Professional · Amazon Web Services
Jun 2026

COMMUNITY

AWS Community Mongolia — Organizer
2019 – Present

-
- Grew Mongolia’s AWS user community to **1,200+ members**, ran 50+ technical events, and mentored 20+ engineers to AWS certification.

EDUCATION

M.S., Computer Science · Maharishi International University, Fairfield, Iowa
Feb 2026 – Oct 2028 (expected)

B.S., Information Technology · Mongolian University of Science and Technology
2014 – 2018
