Office of University Development, Digital Infrastructure Team
University of Michigan, 2301 Commonwealth Blvd, Ann Arbor, MI 48105

Re: Systems Architect, Job Opening ID 281849

Dear Hiring Team,

I am applying for the Systems Architect position in the Office of University Development. Paul Fisher reached out to me about this role.

I have 7 years of experience as a DevOps and Cloud Engineer with a software engineering background, and I am an AWS Certified Solutions Architect – Professional. My work has focused on system architecture, data flows between applications, and secure, scalable platforms in production.

What I bring to this role:

- **System and data architecture:** designed a multi-AZ AWS platform with Terraform (VPC, ALB, Auto Scaling, RDS Multi-AZ, Route 53) and built a healthcare platform on Go, PostgreSQL, Redis and Kubernetes that handles 40,000+ orders under regulatory compliance.
- **Integration and event-driven architecture:** integrated multiple third-party APIs into a fully automated pipeline, built microservices with RabbitMQ messaging, and built an AI agent (OpenAI, RAG) that works on live data.
- **Cloud, DevOps and security:** AWS, Docker, Kubernetes, Terraform, Ansible, GitHub Actions, GitLab CI, Prometheus, Grafana, OWASP scanning, IAM least privilege. Cut cloud spend by 40% and change failure rate by 30%.
- **Technical leadership:** led 20+ engineers building a national public cloud platform with 99.95% uptime, standardized CI/CD across 5+ products, wrote runbooks, and mentored 20+ engineers through the AWS community I organize.

I am pursuing an M.S. in Computer Science and want to grow as an architect in an organization with a long-term mission. Designing OUD's data lake, data integration standards and security frameworks is the work I want to do. I am available to start on September 28, 2026 and am happy to relocate to Ann Arbor for the hybrid schedule.

Thank you for your consideration.

Sincerely,

Darkhanbayar Erdenebat
