

Darkhanbayar Erdenebat

Cloud Engineer | DevOps Engineer | FullStack Developer

Fairfield, Iowa, USA • darkhanbayarr@gmail.com • +1 (641) 233-9944 • <https://linkedin.com/in/darkhanbayar-erdenebat> • <https://darkhaa.tech>

PROFESSIONAL SUMMARY

DevOps and Cloud Engineer with 7+ years of experience across cloud infrastructure, platform engineering, and full-stack development. Built and launched Cloud.mn — Mongolia's first public cloud platform — from the ground up, growing it to serve 300+ enterprise clients and expanding operations to Kazakhstan. Hands-on with AWS, Kubernetes, OpenStack, and CI/CD automation across production environments.

EXPERIENCE

SENIOR DEVOPS / CLOUD ENGINEER

Oct 2025 – Jun 2026

TECH PARTNERS

Ulaanbaatar, Mongolia

- Architected AWS high-availability infrastructure (Route 53, ALB, Auto Scaling, ECR, Secrets Manager) for Mobilife, collaborating with product and engineering teams to replace a fragile single-instance setup, enabling zero-downtime releases and production-grade scalability.
- Developed a production infrastructure runbook (Prometheus, Grafana, CloudWatch, SNS), empowering the operations team to independently execute deployments and incident response, cutting mean time to resolution across all products.
- Standardized CI/CD pipelines (Docker, ECR) across 5+ products, aligning cross-functional engineering teams on a unified delivery workflow, reducing release friction and improving deployment consistency.
- Implemented OWASP security controls and automated scanning (SonarQube), leading security reviews across the engineering team, reducing deployment incidents by 30%.

SENIOR ENGINEER (PART-TIME)

Jun 2021 – Feb 2025

TECH PARTNERS

Ulaanbaatar, Mongolia

- Engineered MedOrder, a healthcare SaaS platform (Golang, PostgreSQL, Kubernetes, Redis), partnering with MedTech Partner stakeholders to deliver real-time pharmaceutical order tracking, processing 40,000+ orders with full regulatory compliance.
- Designed a microservices backend (Golang, AWS, Kubernetes, RabbitMQ) for iTrip, collaborating with product and design teams to integrate 8+ travel APIs (Amadeus, Route24, Viator, Trip.com) and payment gateways, launching Mongolia's first all-in-one travel booking platform.
- Delivered full-stack platform features (Docker, Kubernetes, CI/CD) across healthcare and travel verticals, coordinating with cross-functional teams, achieving zero-downtime deployments across all production releases.

CHIEF TECHNOLOGY OFFICER

Apr 2022 – Mar 2024

FIBO CLOUD

Ulaanbaatar, Mongolia

- Directed cloud platform engineering (OpenStack, Kubernetes, Docker, MariaDB, Redis, RabbitMQ) for Cloud.mn and TTC Cloud, leading a 20+ person team of engineers, architects, and PMs, scaling Mongolia's first public cloud to 300+ enterprise clients.
- Launched TTC Cloud on Transtelecom's datacenter (Kazakhstan), coordinating with local payment providers, compliance teams, and datacenter operators, expanding cloud operations internationally.
- Designed a developer skills assessment framework, collaborating with HR and engineering leadership to standardize hiring and performance evaluation, improving recruitment efficiency by 30% and team evaluation accuracy by 25%.
- Automated infrastructure provisioning and deployment workflows (Ansible, CI/CD), aligning engineering and product teams on standardized delivery processes, accelerating time-to-market for new cloud services by 35%.

SENIOR SOFTWARE ENGINEER / TEAM LEAD

Oct 2021 – Apr 2022

FIBO CLOUD

Ulaanbaatar, Mongolia

- Executed a full AWS migration (EC2, S3, CloudFront, RDS, ELB, Auto Scaling, Route 53) for UFE's online learning system, collaborating with AWS engineers and university stakeholders during a COVID-19 lockdown sprint, delivering the migration in 10 days with zero downtime — recognized as an official AWS case study.

- Managed a 10+ engineer team to scale Cloud.mn infrastructure (OpenStack, KVM, Ansible) and drive provisioning automation, onboarding 300+ enterprise clients and reducing manual provisioning time by 90%.
- Architected production cloud infrastructure (OpenStack, KVM, Ansible), working with the DevOps team to establish monitoring and failover protocols, maintaining 99.95% platform uptime.
- Developed backend services integrating OpenStack APIs (Compute, Networking, Identity, Storage) and Kubernetes orchestration, enabling self-service cloud resource management for end users, supporting multi-tenant containerized workloads at scale.

FRONTEND ENGINEER

Mar 2019 – Oct 2021

FIBO CLOUD

Ulaanbaatar, Mongolia

- Built frontend interfaces for Cloud.mn (React, TypeScript), collaborating with backend and DevOps teams from the platform's earliest stages, establishing the user-facing layer of Mongolia's first public cloud platform.
- Expanded technical scope into DevOps and infrastructure automation (Ansible, OpenStack APIs) through self-directed learning alongside daily frontend responsibilities, transitioning into a full-stack engineering role within 2 years.

TECHNICAL SKILLS

Languages: Python, Bash, JavaScript, Go (working knowledge)

Cloud: AWS (EC2, S3, RDS, CloudFront, Route 53, ALB, Auto Scaling, CloudWatch, ECR, Secrets Manager, SSM, others), OpenStack

Containers: Kubernetes (CKA certified), Docker

Databases: PostgreSQL, Redis

Observability: Prometheus, Grafana

Practices: Microservices, Distributed Systems, CI/CD, Infrastructure as Code, GitOps

Security: OWASP, Automated Security Scanning, Snyk

COMMUNITY

AWS Community Mongolia — Organizer

2019 – Present

Amazon Web Services

Built and organized Mongolia's AWS user community to 1,200+ members, running 50+ technical events and helping 20+ engineers achieve AWS certification.

CERTIFICATIONS

CKA: Certified Kubernetes Administrator

Mar 2022

The Linux Foundation

AWS Certified Developer — Associate

May 2020

Amazon Web Services

EDUCATION

M.S., Computer Science

Feb 2026 – Oct 2028

Maharishi International University, Fairfield, Iowa

B.S., Information Technology

2014 – 2018

Mongolian University of Science and Technology
